LITERATURE SURVEY

S.no	Title	Author	Abstract
S.no	Title BANKING WITH A CHATBOT – A STUDY ON TECHNOLOGY ACCEPTANCE	Author Mónika-Anetta Ibolya VIZELI ZSUZSA SĂPLĂCAN	The implementation of chatbot technology is evolving rapidly in the banking industry, yet customer acceptance is behind. The aim of the present paper is to identify the factors that influence consumers' intention to use chatbot technology applied in the banking industry. The measurement development and hypotheses were based on the technology acceptance model extended with compatibility, customers' perceived privacy risk and awareness of the service. The sample contains 287 respondents, out of whom 24% have previously used a banking chatbot. The measure items were validated by a measurement model and hypotheses were tested using Partial Least Squares-Structural Equation Modeling (PLS-SEM). The findings highlight the importance
			of perceived compatibility and perceived usefulness in the adoption of banking chatbot technology.

	A CASE STUDY		customers by offering them a
			quick response to their queries.
			Technology has helped humans
			to evolve from the Stone Age to
			the modern digital era. The pace
			of the shift in consumerism
			behavior from a service seeker to
			a game-changer is quite quick.
			Gone are the days, when a
			business could afford to
			prioritize the customers' needs at
			a later stage. With the customer
			becoming the ultimate decision-
			maker for a business to stay or
			_
			go, it had become the priority of
			every business to ensure that
			customer satisfaction is achieved
			at any extent. Speaking about the
			banking sector, technology has
			gifted many exclusive ways to
			allow the industry to gain
			customer's satisfaction to the
			maximum. One such smart
			strategy is to introduce the
			chatbots to its customers.
			Chatbots designed with AI are
			one of the most promising
1	1		strategies of a banking business

			that can lead the bank to win the satisfaction vote of their loyal customers.
4.	Conversation to Automation in Banking Through Chatbot Using Artificial Machine Intelligence Language	Sasha Fathima Suhel Vinod Kumar Shukla Sonali Vyas Ved Prakash Mishra	Artificial Machine Intelligence is a very complicated topic. It involves creating machines that are capable of simulating knowledge. This paper examines some of the latest AI patterns and activities and then provides alternative theory of change in some of the popular and widely accepted postulates of today. Based on basic A.I. (Artificial Intelligence) structuring and working for this, System-Chatbots are made (or chatter bots). The paper shows that A.I is ever improving. As of now there isn't enough information on A.I. however this paper provides a new concept which addresses machine intelligence and sheds light on the potential of intelligent systems. The rise of chatbots in the finance sector is the latest disruptive force that has changed the way customers interact. In the banking industry, the introduction of Artificial Intelligence has driven chatbots and changed the face of the interaction between bank and customers. The banking sector plays an important role in development into any country. It also explores the existing usability of chatbot to assess whether it can fulfill customers
5.	Artificial intelligence in banking A case study of the introduction of a virtual assistant into customer service	Mehmet Ates	ever-changing needs. The usage of artificial intelligence in banking is an important theme within entrepreneurial research. The purpose of the study was to analyse the motivations, challenges and opportunities for Swedish banking institutes to implement artificial intelligence based solutions into their

	T	T	
			customer service process. The
			research is based on a case study
			of the Swedish banking institute
			Swedbank AB, who introduced
			an AI based virtual assistant
			(Nina) to deal with customer
			requests. For the qualitative
			study, interviews with Swedish
			banking customer and experts
			were conducted. Further, to
			understand the managerial
			motivations of Swedbank, a
			theory of Moore (2008)
			regarding innovation
			management was applied. The findings display that Nina
			improved the service spectrum
			of Swedbank with the potential
			of decreasing costs, while
			maintaining customer
			satisfaction. Further, the results
			displayed a high acceptance of
			new technologies from the
			customer perspective. This
			provides the foundation for
			Swedbank to introduce further
			artificial intelligence based
			services. Banking institutes and
			other service oriented
			organisations with high customer
			interaction can use the
			implications of the thesis when
			considering to more effectively
			handle customer requests
6.	Intelligent Chat Bot for	Mr. Aniket Dole	An intelligent chat bot will be
"	Banking System	Mr. Hrushikesh	used to give information or
		Sansare,	answers to any question asked by
		Mr. Ritesh	user related to bank. Our
		Harekar,	Intelligent system will first take
		Mrs. Sprooha	input from bank customer. This
		Athalye	input will be taken as voice or
			written format. According to
			input, intelligent system will
			processes the query and give
			response to user. An artificial
			intelligence is most important
			and helpful part of our project.
			Intelligent system is automation
			TOL ACHVILLES ASSOCIATED WITH
			of activities associated with human thinking, decision

making, and problem solving process. This system will be available on web. Our system will represent the design and development of an intelligent chat bot. It will present a technology demonstrator to verify a proposed framework required to support such a bot (a web service). While a black box approach is used, by controlling the communication structure, to and from the web-service, the web-service allows all types of clients to communicate to the server from any platform. The service provided will be accessible through a generated interface which allows for seamless XML processing; whereby the extensibility improves the lifespan of such a service. By introducing an artificial brain, the webbased bot generates customized user responses, aligned to the desired character
